1. Problem Statement

Gloria is responsible for monitoring the performance of two machines in a factory. She needs to determine which of the two machines is operating closest to the optimal temperature of 100 degrees Celsius using the relational operator.

Assist Gloria in displaying the machine's temperature, which is closer to 100, and the difference from 100.

Input Format

The first line of input consists of an integer N, representing the temperature of the first machine.

The second line consists of an integer M, representing the temperature of the second machine.

Output Format

The output prints "The integer closer to 100 is X with a difference of Y" where X is the temperature of the closer machine and Y is the difference from 100.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 90
80

Output: The integer closer to 100 is 90 with a difference of 10

Answer

```
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner scanner=new Scanner(System.in);
        int a= scanner.nextInt();
        int b=scanner.nextInt();
        int c=Math.abs(a-100);
        int d=Math.abs(b-100);
        if (c<d){
            System.out.print("The integer closer to 100 is"+a+"with a difference
of"+c);
        }
        else{
            System.out.print("The integer closer to 100 is"+b+"with a difference
of"+d);
        }
        scanner.close();
    }
}
```

Status : Correct

1. PROBLEM STATEMENT:

Dave got two students who wants help with their doubt. Each handouts an integer and wants to find if one Integer Positive While the Other is Not Divisible by 3. Write a program to achieve this and conclude for them.

Input Format

The first line of input represents the first integer.

The second line of input represents the second integer.

Output Format

The output should display as "One of the integers is positive while the other is not divisible by 3." or "Neither of the integers meets the condition."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

3

Output: One of the integers is positive while the other is not divisible by 3.

Answer

```
import java.util.Scanner;
public class Main{
    public static void main(String[]args){
        Scanner sc=new Scanner(System.in);
        int a=sc.nextInt();
        int b=sc.nextInt();
        if ((a > 0 && b % 3 != 0) || (b > 0 && a % 3 != 0)) {
            System.out.print("One of the integers is positive while the other is not
divisible by 3.");
        }
        else{
            System.out.print("Neither of the integers meets the condition.");
        }

        sc.close();
    }
}
```

1. Problem statement

Manoj, a developer at MoneyMatters Inc., is working on improving the company's financial system. He needs to create a program that takes an integer input, converts it into a double, and displays both the original integer and the converted double value.

Input Format

The input consists of a single integer representing a monetary amount.

Output Format

The first line of the output displays the "Original Integer: ", followed by an integer representation of the input value.

The second line displays the "Converted Double: ", followed by a double value representing the input as a decimal value.

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 20

Output: Original Integer: 20

Converted Double: 20.0

Answer

```
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner sc= new Scanner(System.in);
        int a= sc.nextInt();
        System.out.print("Original Integer:"+a);
        double b=a;
        System.out.print("Converted Double:"+b);
        sc.close();
    }
}
```
